

Challenge#4: Implementation of Favicon

Steps to Apply Favicon:

1. Create the Favicon:

Design a square image for your favicon, typically in the dimensions of 16x16 pixels or 32x32 pixels. Save it in a commonly supported format like .ico, .png, or .gif.

2. Name the Favicon File:

Save the favicon file with the name "favicon" and the appropriate file extension (e.g., favicon.ico).

3. Upload to Website Root:

Place the favicon file in the root directory of your website. This is often the main folder where your website's index.html or default.html file is located.

4. Add Favicon Code to HTML:

Insert the following code within the <head> section of your HTML document, specifying the location of your favicon file:

```
<link rel="icon" type="image/x-icon" href="pictures/favicon.ico.png">
```

5. Verify Implementation:

Save your HTML file, upload it to your web server, and then access your website using a web browser. Verify that the favicon appears in the browser tab or next to the URL.

Example HTML Code:

```
<html lang="en">
<head>
  <meta charset="UTF-8" />
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0" />
  <script src="https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.4.2/js/all.min.js"></script>
  <link rel="icon" type="image/x-icon" href="pictures/favicon.ico.png">
  <title>Pajes Bakeshop</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>
```

6. Clear Browser Cache:

If the favicon doesn't appear immediately, try clearing your browser cache and refreshing the page. This ensures that the updated favicon is loaded.
